

# Point-Of-Use Dispensers

## DEDICATED POU DISPENSERS

The Glacier Hot and Cold and Avalanche countertop dispensers are available as Point-Of-Use (POU) ready. Crystal Mountain's POU system consists of two mechanical floats, primary and secondary, a 5 micron air filter and a 1/4" inlet tube. The Primary float regulates water flow to the reservoir and the secondary float acts as a safety precaution. Operating conditions are indicated by a manual reset switch; green indicates normal function and when the secondary float has been activated it changes to red. The reset switch is conveniently located on the top of the system for easy access. These POU dispensers can plumb into an existing water line or filtration unit.

# Point-Of-Use Dispensers

## **CONVERTIBLE POU DISPENSERS**

All models of the Glacier, Mogul and Summit are easily converted to a Point-Of-Use dispenser. Utilizing the same system as the dedicated dispensers, the POU kit consists of two mechanical floats, primary and secondary, a 5 micron air filter and a 1/4" inlet tube. The primary float regulates water flow to the reservoir and the secondary float acts as a safety precaution. Operating conditions are indicated by a manual reset switch; green indicates normal function and when the secondary float has been activated it changes to red. The reset switch is conveniently located on the top of the system for easy access. Each kit also includes a matching cover to continue the clean look and finish of the cabinet. This system can plumb into an existing water line or filtration unit.
